

Canadian Soils (ontario)

Posted by grey.owl86 - 2009/10/31 18:27

I am having problems trying to create a .dbf for Canadian soils. There seem to be compatible downloads for all 50 US states, but I can't find anything for the 51st State! Is there any support for us Canucks?
thanks

I love this software

As I think you've already discovered, AGWA supports 3 soils types: SSURGO, STATSGO, and FAO. SSURGO and STATSGO data is only available in the US but FAO data is available internationally.

I see from your other post that you've found the FAO data and are having trouble getting it to work. I'll take a look and respond to the error in that thread.
